

## Contests literature

Suggestions from Dan Kovenock, July 2017

- Roberson and Kovenock survey on Contests with Multiple Battlefields, Oxford Handbook of the Economics of Peace and Conflict, Michele Garfinkel and Stergios Skaperdas eds.
- Snyder, with looks at both the expected sum of battlefields won objective and the majoritarian objective.
- Klumpp and Polborn: cases (with 7+ targets) when the equilibrium in the majoritarian case is only in nondegenerate mixed strategies.
- Several by Fletcher and Slutsky
  - they may have more since these, you might look and see
- Alexander Robson (student of Stergios): multibattle contests with Tullock CSF.
